

MR CONFETTI

MARDI GRAS 2004 MTV FLOAT

PROFESSIONAL LAUNCHING SYSTEMS

(Australian Safety Approved hire items)

SILENT STORM

A continuous flow system, which is designed to run with minimal noise. Powered by 240v power, it is supplied with an adjustable remote control, which increases or decreases the fan speed. The Silent Storm shoots horizontally from one end of the machine and can fire confetti approximately 12 -15m or 40 - 50ft (depending on rigging height). A wide range of confetti shapes can be used. Fantastic for using in venues with high ceilings.

MINI BLASTER

Half the size and weight of the Big Blaster. Perfect for small to medium venues: theatres, clubs, tv studios, auditoriums and ballrooms. Blasts confetti approximately 10 - 12m or 30 - 40 ft . Powered by a single CO² cylinder.

BIG BLASTER

Continuous flow units can blast confetti approximately 18 - 20m or 60 - 70 ft into the air (0.5kg of confetti per second for approximately 40 seconds). Wide range of confetti shapes and sizes can be used. Great for large venues: stadiums, arenas etc. Requires two CO² cylinders.

BIG SHOTS

Double-barrel cannons propel confetti approximately 12m or 40 ft and streamers approximately 20m or 65ft. Electronically fired and easy to rig. They can create a fountain effect (wall of confetti) if placed in front of a stage or a waterfall effect if rigged from a truss or placed on speaker stacks. Uses compressed air.

1" HAND HELD CANNONS + 2" HANDHELD CANNONS

This simple-to-operate, manually fired cannon delivers an impressive effect. It can propel tissue and metallic confetti approximately 10m or 30ft into the air and streamers approximately 15 m or 50ft. Powered by threaded CO² cartridges. The 2" has 5 times the pay load. Your choice of colours and product mix.

EFX FAN

Hand feed confetti through the specially designed inlet to launch confetti. Either through a moving tube creating a spray of confetti or fix the tube via rigging points to elevate the confetti dispersment point. Perfect for large venues requiring large coverage from the ground or catwalks. EFX fans can be used without the tube creating upward wind currents to enhance confetti effects as well.
